

Enviromental Policy

RTS Wind AG

Our goals

The environmental policy of RTS Wind AG is directed to all employees and divisions of RTS Wind AG, including the subsidiaries „ RTS Wind GmbH“ in Austria as well as „RTS Wind Ltd“ in the U.K.

The aim of the environmental management system is the continuous improvement of operational environmental protection. This includes annual improvements in measurable results such as energy consumption, waste generation and resource conservation.

The foundation for sustainable development is the interplay of economy, ecology, and social issues. Clearly, the safety and health of our employees is high priority and is the responsibility of the management. All employees work equally responsible in the daily implementation of environmental protection measures.

Duties & Rights

For RTS Wind AG and its subsidiaries to be able to meet this responsibility, employees have the duty to point out recognised dangers and the right to eliminate potential dangers. This also includes the indication of not yet exhausted potentials about the saving of waste, resources, and energy.

To submit these tips, an e-mail can be sent to
umweltmanagement@rts-wind.de

Environmental Guidelines

Employees are required to observe and comply with the environmental guidelines of RTS Wind AG in their daily work. The environmental management system we practise complies with the requirements of DIN EN ISO 14001.

The environmental guidelines of RTS Wind AG are as follows:

- ✓ We set ourselves the goal of continuously improving environmental protection and ensure this by establishing an environmental management system.
- ✓ The inclusion of environmental thinking and the development of environmental awareness in daily work for all employees is a basic principle.
- ✓ Strict compliance with environmental laws and regulations as well as future-oriented action, in particular reduction of waste and environmentally harmful emissions to a minimum.
- ✓ The collection of environmental data (water consumption, wastewater, electricity consumption) serves as the basis for a comprehensive saving of energy and resources.
- ✓ In procurement, environmental impacts are considered with regard to use and disposal (especially in the case of hazardous substances).
- ✓ With the voluntary introduction of the environmental management system according to DIN EN ISO 14001 from 2020, we are underpinning our efforts for effective and sustainable environmental protection.
- ✓ We involve our suppliers and customers in our efforts to protect the environment and seek solutions together with them.

**We're creating
the future.**
